

# Neutral Classification Sheet

NCS-04-07 • ORIGINAL ISSUE 2004 • RETAINED WORKING FORM

A classification sheet with fields for finish sample, substrate, adjacent field and replacement note. It treats ambient condition as a margin observation rather than a classification field.

## PROVENANCE

A blank reference sheet preserved from the first Neutral Field Register working set.

## WHY PRESERVED

Uses the older background-finish language while already asking reviewers to note substrate and adjacent surfaces.

## RELATED RECORDS
